

## PRODUCT PRESENTATION

# SICO Lubrication Pressure Control

## RELIABLE PRODUCTION THROUGH OPTIMUM ROLLER ROD LUBRICATION

The principle of the Siempelkamp innovation **SICO Lubrication Pressure Control**: Sensors monitor the pressure in each system of the individual lubricant distributors. If the pressure rises or if malfunctions occur, the pressure control system warns automatically and directly.

Since it also prevents dry lubrication points and inadequate lubrication, the SICO Lubrication Pressure Control ensures additional production reliability, higher quality and more profitability.

### YOUR BENEFITS

- No expensive consequential damage due to inadequate lubrication
- Consistently high product quality
- Increased system availability
